August 31, 2020 â€” Hello! Recently I tried to do some injections of the Nintendo 64 (N64) Wii Virtual Console using the latest officially released WAD "Bomberman...". It took a long time and I started noticing some bugs like memory usage etc. I didn't like all this that I decided to get rid of this product. I installed Windows 7. I started WAD again using the Wii console, but I don't want to use the Wii console, so I uninstalled the Wii console. I then installed Windows 7 64 bit on my computer and the installation was successful. I also reinstalled the Wii emulator. Now I want to

uninstall Windows 7 and run the Wii emulator.
